EXAMINER

CAMPBELL, JOSHUA D

ART UNIT	PAPER NUMBER
----------	--------------

2178

DATE MAILED: 03/08/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/843,068	Applicant(s) HOFFMAN ET AL.	
	Examiner Joshua D. Campbell	Art Unit 2178	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 28 April 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-18 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-18 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This action is responsive to communications: Appeal Brief filed on 4/28/2005.
2. Claims 1-18 are pending in this case. Claims 1, 4, 7, 10, 13, and 16 are independent claims.
3. The rejection of claims 1-18 under 35 U.S.C. 102(b) as being anticipated by Microsoft Excel (hereinafter Excel, Microsoft Excel 2000, released in 1999) has been withdrawn due to the arguments presented in the appeal brief filed on 4/28/2005, new grounds of rejection is presented below.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
5. Claims 1-18 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The examiner can find no evidence in the specification of what the difference between metadata information and metadata objects and the defined difference between the two terms is essential to enable the claimed invention. Metadata is defined as data for describing data, thus leading the examiner to believe metadata information

Art Unit: 2178

is nothing more than data for describing data, due to lack of a specific definition in the specification. Metadata objects are defined by the applicants as "data for describing data objects," (page 1, lines 7-8 of Applicant's specification) however it remains unclear to the examiner what the defined difference between data and data objects is. The common meaning of data object is a unit data, or in simpler terms data, and the applicant has not set forth a more detailed definition of data object in the specification. For this reason, there seems to be no definable difference between metadata information and metadata objects, and without a defined difference of these terms the claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. In order to further prosecution the examiner will interpret the metadata information and metadata objects as being data for describing data and no further weight will be given to these terms when considering the claimed limitations.

Claim Rejections - 35 USC § 101

6. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1, 4, 7, 10, 13, and 16 are rejected under 35 U.S.C. 101 because all of these claims fail to produce any sort of concrete and tangible result. Simply displaying on a document is in no way considered to be a concrete and tangible result, and merely

providing a command that could trigger a result, without ever having the command being used does not remedy that problem.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

9. Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Egilsson (US Patent Number 6,286,017, issued on September 4, 2001) in view of Chester et al. (hereinafter Chester, "Mastering Excel 97 Fourth Edition," published in 1997).

Regarding independent claim 1, Egilsson discloses displaying a spreadsheet that includes metadata information (Figure 5 and column 10, lines 50-64 and column 12,

line 34-column 14, line 65 of Egilsson). Egilsson does not disclose providing a command to trigger a conversion of the spreadsheet into a comma separated value (CSV) file. However, Chester discloses that it was common to allow the conversion of spreadsheet files into CSV files and CSV files into spreadsheets (pages 737-738, "Text Files with Delimiters" and pages 914-915, "To Save a File in a Selected Format" and "To Open a File in a Selected Format" of Chester). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have combined the methods of Egilsson with the teachings of what is common practice in the art by Chester because it would have allowed easy import and export of files in a standard format.

Regarding dependent claim 2, Egilsson discloses parsing the spreadsheet containing metadata information to generate metadata objects (Figure 5 and column 10, lines 50-64 and column 12, line 34-column 14, line 65 of Egilsson). Egilsson does not disclose first converting it into a CSV file. However, Chester discloses that it was common to allow the conversion of spreadsheet files into CSV files and CSV files into spreadsheets (pages 737-738, "Text Files with Delimiters" and pages 914-915, "To Save a File in a Selected Format" and "To Open a File in a Selected Format" of Chester) and because of the ability to convert from CSV files to spreadsheet files and vice versa any functionality capable in a spreadsheet could be applied to a CSV file. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have combined the methods of Egilsson with the teachings of what is common practice in the art by Chester because it would have allowed easy import and export of files in a standard format.

Regarding dependent claim 3, Egilsson discloses that a computer receives user input of metadata information and inputs it into a spreadsheet (column 3, lines 3-23 of Egilsson).

Regarding independent claim 4, Egilsson discloses displaying a spreadsheet that includes metadata information (input variables and output variables) and metadata directives (manipulation variables) (Figure 5 and column 10, lines 50-64 and column 12, line 34-column 14, line 65 of Egilsson). Egilsson does not disclose providing a command to trigger a conversion of the spreadsheet into a comma separated value (CSV) file. However, Chester discloses that it was common to allow the conversion of spreadsheet files into CSV files and CSV files into spreadsheets (pages 737-738, "Text Files with Delimiters" and pages 914-915, "To Save a File in a Selected Format" and "To Open a File in a Selected Format" of Chester). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have combined the methods of Egilsson with the teachings of what is common practice in the art by Chester because it would have allowed easy import and export of files in a standard format.

Regarding dependent claim 5, Egilsson discloses parsing the spreadsheet containing metadata information (input variables) to generate metadata objects (resulting source code) based on metadata directives (manipulation variables) (Figure 5 and column 10, lines 50-64 and column 12, line 34-column 14, line 65 of Egilsson). Egilsson does not disclose first converting it into a CSV file. However, Chester discloses that it was common to allow the conversion of spreadsheet files into CSV files and CSV files into spreadsheets (pages 737-738, "Text Files with Delimiters" and pages

914-915, "To Save a File in a Selected Format" and "To Open a File in a Selected Format" of Chester) and because of the ability to convert from CSV files to spreadsheet files and vice versa any functionality capable in a spreadsheet could be applied to a CSV file. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have combined the methods of Egilsson with the teachings of what is common practice in the art by Chester because it would have allowed easy import and export of files in a standard format.

Regarding dependent claim 6, Egilsson discloses that a computer receives user input of metadata information and metadata directives) and inputs it into a spreadsheet (column 3, lines 3-23 of Egilsson).

Regarding independent claim 7 and dependent claims 8 and 9, the claims incorporate substantially similar subject matter as claims 1-3. Thus, the claims are rejected along the same rationale as claims 1-3.

Regarding independent claim 10 and dependent claims 11 and 12, the claims incorporate substantially similar subject matter as claims 4-6. Thus, the claims are rejected along the same rationale as claims 4-6.

Regarding independent claim 13 and dependent claims 14 and 15, the claims incorporate substantially similar subject matter as claims 1-3. Thus, the claims are rejected along the same rationale as claims 1-3.

Regarding independent claim 16 and dependent claims 17 and 18, the claims incorporate substantially similar subject matter as claims 4-6. Thus, the claims are rejected along the same rationale as claims 4-6.

Response to Arguments

10. Applicant's arguments, see Appeal Brief, filed 4/28/2005, with respect to the rejection(s) of claim(s) 1-8 under 35 U.S.C. 102(b) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection has been made.

Conclusion

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

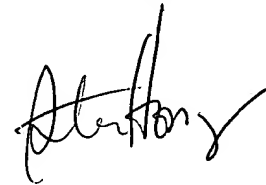

US Patent Number 5,317,686

US Patent Number 6,549,922

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joshua D. Campbell whose telephone number is (571) 272-4133. The examiner can normally be reached on M-F (7:30 AM - 4:00 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Hong can be reached on (571) 272-4124. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
